KZNGFA Business Process Reengineering

AS-IS BUSINESS PROCESS MAPS – FINANCE

Symbols

March 2026

This document is a process document. It illustrates the processes within the KZNGFA from start to end, together with the relevant sub-processes. There are a number of symbols that are used throughout this document, as illustrated below:

Start

This icon indicates where the process begins. It shows the entry point of your process. Further adjustments to the symbol signifies additional information detailed below:

Timer — Indicates when a process is initiated by a time factor

Message — Indicates when a process is initiated by an incoming message

Intermediate — Indicates when a process adjoining process starts parallel to primary process

End

This icon tells you where the process ends. It shows the point at which the process ends

Off-page Throw and Catch — This symbol illustrates the transfer of a process to a different point; where the process continues on a different page or initiates a new process

A B — On-page Throw and Catch — This symbol illustrates the transfer of a process to a different point; where the process continues on the same page

Process / Action

The rectangle is used to show a process, task, action, or operation. It shows something that has to be done or an action that has to be taken

Sub-process

This shape refers to a process that is defined elsewhere. This shape means that there is a process map for the process that has already been drawn & you should reference it for more information.

Gateway

A decision asks a question. The answer to the question determines which arrow you follow out of the decision shape

Exclusive Gateway — When splitting, it routes the sequence flow to exactly one of the outgoing branches. When merging, it awaits one incoming branch to complete before triggering the outgoing flow

Parallel Gateway — Used to split the sequence flow, all outgoing branches are activated simultaneously. When merging parallel branches it waits for all incoming branches to complete before triggering the outgoing flow.

Documents

A rectangle with a fold at top right represents a document or report & is used to show inputs to or outputs from a process step

A data Input is an external input for the process or task. This is the input parameter for the process or task.

A data output is a data result of the process or task. This is the result produced by the process or task.

Data Store

This icon is used to indicate a place where the process can read or write data e.g. database or filing

Sequence Flow

Defines the execution order of activities

Association Flow

A Data Association is used to associate data elements to Activities, Processes. Associations link documents, files and data stores

Pools and Lanes

Pool — Lane 1 — Lane 2

A pool or a lane can be an organization, a role, or a system. Lanes subdivide pools or other lanes hierarchically.
